

THE FISHER XP-9C

Four-way loudspeaker box

THE FISHER WS-70

Two-way loudspeaker box

THE FISHER WS-80

Three-way loudspeaker box

XP-9C

This special loudspeaker system consists of a woofer, two equal midrange speakers, a tweeter and a super tweeter. This results in crystal clear sound and broad sound radiation. A height regulator on the back of the box allows it to be adapted to the room acoustics. Housing design: natural walnut.

WS-70 WS-80

The term "WS" was derived from the English "wide surround". That means: sound radiation within a radius of 360°. The emitted sound is generated with the help of one (WS-70) or several conical reflectors (WS-80) diverted horizontally. This results in an all-round uniform sound. It makes the listener largely independent of the acoustic center point and mediates even if it is placed in an unfavorable way the seats produce an excellent sound impression. The WS-70 loudspeaker box contains a woofer / midrange speaker and a tweeter.

The WS-80 loudspeaker box combines a woofer, a midrange and a tweeter.

Both standing boxes are available in the natural walnut finish.
