

Sansui SP-X1100

Sansui hi-fi speakers:

Sansui's Earthshaker:

powerful 4-way, 8-speaker system with dual woofers

The SP-X11000 is a system for demanding listeners. Sansui has split the eight drivers into two independent, mirror-image units to avoid interference and assure cleaner, fresher sound.

It's a massive system standing 968mm high x 610mm wide.

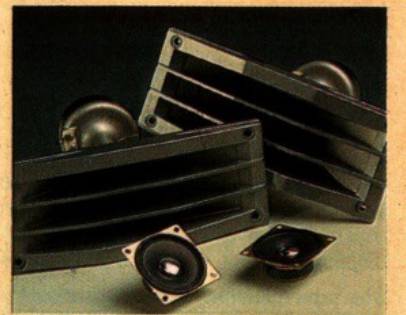

Uniform output is achieved over the wide range of power handling capacity to 350W

Sansui has increased the power handling capacity to a recommended safe 350 watts, but response is excellent and distortion-free over a wide range of power input from 1-400 watts. Impedance is 8 ohms with a 102dB/W sensitivity.

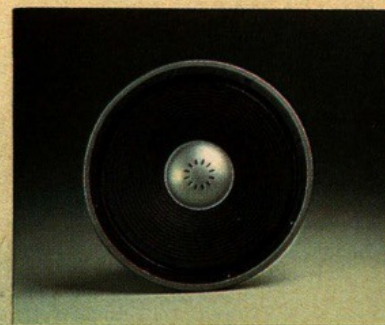

Two jumbo 17 inch woofers

Basic to the uniquely double-rich bass sound and powerful damping capability of these woofers is a corrugated diaphragm made of an exclusive pulp formulation, plus a voice coil that cannot be physically distorted because of its ability to dissipate heat quickly even at high power.

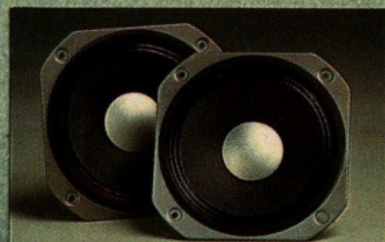

Twin horn tweeters and twin supertweeters provide crisp, full-textured highs

Sansui engineers have extended the high end with a duo of highly accurate super-tweeters placed on the front baffle for room-wide dispersion, on the basis that what you don't hear can hurt you if the supersonic overtones create sonic disturbances in the part of the frequency spectrum that you do hear.

For close-up vocal clarity twin 6-1/2" mid-ranges

Custom-mix pulp cones retain their shape under high-amplitude pulsive inputs ensuring excellent signal-to-noise and frequency response performance. You enjoy flat faithful reproduction.

Level control compensates for in-home acoustics

The level control has 3 positions: Natural, for no special compensation, Soft and Clear for rooms that tend to over-emphasize or distort frequencies.
